Eric and all,

Due to a major fire at Bethlehem Steel, WGRZ has most of their staff there covering it, including asking me to assist.

I have to reschedule today's interview. I apologize for the late notice but no one anticipated this fire. The black smoke covers many miles toward the southtowns and authorities have given very little indication of what is going on and what risks there are.

Michael, is EPA dealing with this fire? If so, please call me asap?

Dan:

Wednesday November 9, 2016 - 10:30 am - Niagara Falls Blvd Site - EPA Command Post Trailer -
CONFIRMED

Our Office of Regional Counsel is actively conducting research into potential responsible parties (PRPs) that may have been involved. Because it is an active enforcement action, no one at EPA can comment about the 1979 private investigators report and any related enforcement activities. Eric can assist in explaining the general process that our agency utilizes in a search for PRPs, but that is as far as he can go. He will be

available to update you on the status of our activities at the Niagara Falls Blvd and Holy Trinity Cemetery sites.

Hi Mike,

Wednesday Nov 9 at 10:30 am works.

A few things: The private investigator's report from 1979 is less than 20 pages. Surely Eric could read it before our scheduled interview and comment on its contents since EPA and state agencies seem to believe Union Carbide is responsible for the contamination at the cemetery and bowling alley, and potentially other sites.

If he cannot, I need EPA to provide me with someone who can, since it is a critical element to my story.

In addition, I need to talk to someone at EPA about the below question, if Eric cannot answer:

- Why EPA seems to only be focusing on Union Carbide? Why not Oldbury Furnace which is a subsidiary of Occidental and was mentioned numerous times in EPA-NYS records as another potential source. Or, is the EPA in fact inquiring with other companies as potential sources of this material, and if so, who are these companies?

Dan:

I spoke with Eric Daly the OSC for the Niagara Falls Blvd/Trinity Cemetery sites in Niagara County. He will be available for a follow-up interview on either Tuesday November 8th or Wednesday November 9th. He would prefer if possible either of the following time frames on either day: 10 am - noon or 1:30 pm - 5:00 pm.

Eric will be able to address questions regarding the activities that he is overseeing at these two sites. The 1979 private investigators report entitled Probe International is being reviewed by our office of regional counsel and Eric will not be able to address any questions pertaining to this report.

Please let me know what date/time you would like to meet Eric at the Niagara Falls Blvd location.

Hi Mike

I'd like to schedule an interview with Eric after I return from Philly, which is the week of Nov 7-11th. Eric and I communicated but not anything I wrote down or will use. It was casual but he said it would not be a problem to do another interview soon.

As for the 1979 private investigators report, EPA does have it. I suggest getting it from EPA attorney Margo Ludmer, who has been calling some of the same people I have been calling in trying to verify sections of the report. I think Eric will find that report very interesting if in fact EPA believes Union Carbide is the sole source of this material (although other EPA documents mention Oldbury Furnace, and I don't see EPA questioning Occidental at all about what they did with their radioactive byproduct.)

I am unable to send the document by email because it is larger than what my server allows.

Sincerely,

Dan Telvock

Spoke with Eric Daly this morning 10/24/16 about your request for a interview on the activities at Area 5

near the Holy Trinity Cemetery. Eric did indicate that he did communicate with you last week while you were at the cemetery location.

In addition, you reference a 1979 private investigators report that we do not have. If we could be sent a copy of that report it would be appreciated.

Thanks and have a good day!

Hello gentlemen,

I am doing a follow up story on the radioactive hotspot story I did two months ago.

Can EPA make Eric or someone else available for a short interview?

The subjects are twofold: A 1979 private investigator's report details how this problem may be much worse than originally thought

and

Area 5 near the cemetery where a radon mitigation system was installed in a home and two more homes on expected to be assessed soon for radioactive materials.

I would like to have the interviews done this week or early next.

Thank you

Greeting Mr. Telvock, Below are EPA's responses to your additional questions.

QUESTION: We have obtained two reports - one dated May 10, 1974, and the other dated June 8, 1979- from a private investigating firm called Probe International. It is my understanding that an EPA staff attorney, Margo Ludmer, has been calling the surviving members of this firm. I am not sure why, but I'd like to find out.

Ms. Ludmer is an EPA attorney engaged in research related to EPA's search for potentially responsible parties.

QUESTION: Why hasn't the EPA taken action for 738 Upper Mountain Road yet?

EPA is planning to complete an additional assessment of 738 Upper Mountain Road.

QUESTION: Why hasn't the EPA stepped in to do a more comprehensive review to determine location and severity of additional hotspots?

We decline to speculate about future actions. EPA will continue to partner with N.Y. State to determine appropriate next steps.

QUESTION: I also need to understand what EPA's role is in this.

EPA's respective Removal Action Memorandums, which we believe you have access to by way of your previously completed FOIA requests, etc., describe in full detail the authorities under which EPA has taken action as well as the scope and history of our involvement. Let us know, if you need additional copies and they will be provided for your reference.

Attached is information on how a citizen or group can request that the EPA conduct an assessment of a site for possible inclusion on the National Priorities List (Superfund list). Often states will nominate sites for the NPL.

QUESTION: Does the EPA only get involved if the state sends over properties for NPL consideration or removal consideration?

No. Some short-term (removal) sites come to our attention by other means, such as citizen reports or referrals from the community.

QUESTION: Would EPA do additional surveys to determine the scope of the contaminated properties beyond what is in the 1986 ORNL report?

EPA will continue to partner with N.Y. State on determining appropriate next steps.

Sincerely,

Elias Rodriguez, M.P.A.

Subject: Re: my contact

Hi David

So, here is the basic scope of the info and why I need to interview someone with EPA. If it's Eric Daley, that's fine, but the EPA cannot prohibit him from answering certain questions like they did last time, or he wouldn't be the right expert for us. He could only talk about the bowling alley property. And this story goes way beyond a single property.

We have obtained two reports - one dated May 10, 1974, and the other dated June 8, 1979- from a private investigating firm called Probe International. It is my understanding that an **EPA staff attorney, Margo Ludmer**, has been calling the surviving members of this firm. I am not sure why, but I'd like to find out.

These reports discuss how slag from Union Carbide was widely used in

Niagara Falls. This slag has radioactive elements of varying degrees. Union Carbide is the subject of an EPA inquiry into contamination at the Niagara Falls Boulevard bowling alley, the Holy Trinity Cemetery and a residence on Upper Mountain Road. Union Carbide has denied any responsibility.

Yet, as far as we can tell, there has not been any comprehensive survey of potential hotspots since 1986. In addition, I have obtained records about how a lot of this material was buried in Niagara Falls at what then was called 56th and Pine (screenshot attached). This land, as far as I can tell, is not listed as an inactive hazardous waste site.

Why hasn't the EPA taken action for 738 Upper Mountain Road yet?
Why hasn't the EPA stepped in to do a more comprehensive review to determine location and severity of additional hotspots?

I also need to understand what EPA's role is in this. Does the EPA only get involved if the state sends over properties for NPL consideration or removal consideration? Would EPA do additional surveys to determine the scope of the contaminated properties beyond what is in the 1986 ORNL report?

Sincerely,

Dan Telvock
